# Why Are We Different?

Our Service Value Proposition to You, is Our People:

## Are Genuine Specialists

Have a previous background in their specialized disciplines. E.g., Our Data Scientist Recruiter used to be a Data Scientist

## Follow our Methodology

No matter which office or what position, our Recruiters follow the same tried and tested 35-step search methodology

## Are Prioritized Correctly

Are incentivised not by sales commission, but fixed bonuses for placements + great customer satisfaction surveys

## Are Initiated in our Culture

Give 100%  
Work Hard  
Be Honest  
Make our Clients and Candidates Happy  
Have Fun!

## Are Stable

We try to offer the best working environment, compensation, and management so our people love working here, and stay long term

## How to Make your Application Stand Out

Getting a job has become more competitive than ever. Indeed, standing out from the crowd full of capable people is not an easy thing to do.

However, your shine will not be dull if you follow some tips on how to make your application stand out from the crowd. This applies to most types of mass hiring activities, face-to-face or virtual.

Silicon Valley Associates Recruitment suggests to our Candidates the following steps on how to make your application stand out from the crowd

## Prepare Yourself

Nothing is a good starter than being an early worm. Now is the time to get started and establish your career. This can be done through advanced research in the companies and industries you are interested in. The more prepared you are, the less pressure you feel.

One of the best steps to prepare yourself is to look over profiles (on LinkedIn, professional websites, or social media sites) of your peers in your current role, or people in the industry or company that you desire to be part of or even people who are working in the position you eventually want to reach. Note their skills, academic background, and experiences to know what areas you can focus on improving.

## Enhance your Skills and Capabilities

Boosting skills significantly involves academic progress, experiences, and volunteer works. You can participate in various online and offline training for IT, where others can be freely studied or downloaded online. These additional experiences can be an edge over others, especially for those with equally qualified academic backgrounds like you. To know what skills you want to focus on gaining, you can go back to your previous research on LinkedIn profiles. Get relevant skills that you want to prioritize and enhance.

## Use Self-Assessment Tools and Include that in your Resume

Knowing your strengths and weaknesses is a crucial step in determining the field you want to be part of. You can take online assessments, such as the Career Cluster Interest Survey or the Big Five Personality Test that helps you in self-assessing. Once you allow yourself to be assessed based on your capabilities and things needed to be improved, you can then determine the types of environments that will match your characteristics.

**PERSONALITY TYPE AND FULFILLMENT**  
WHAT ENERGIZES YOU?

Remember these are preferences, not absolutes!  
You will (at times) need all of these things!

**EXTROVERTS AND INTROVERTS**

Extroverts need to engage with the outside world to feel fulfilled. They need interaction, activity, experiences, and frequent contact with friends.

Introverts need regular alone time that is unstructured and free. They also need one or two deep and meaningful friendships.

**INTUITIVES AND SENSORS**

Intuitives need to envision possibilities and imagine creatively. They prize philosophical, abstract discussion and exploration.

Sensors need to explore the world, spend time in nature, craft, build, create, hike, cook, nap. The tangible world excites them want to optimize their relationship to it. They prize facts and practicality. .

**THINKERS AND FEELERS**

Thinkers are energized by problem-solving, troubleshooting, and making things either inside or outside of themselves effective. They prize logical debate, discussion, and analysis.

Feelers are energized by understanding people (or themselves) on a deep level. They enjoy counseling, empathizing, and developing emotional bonds. They prize ethical integrity and harmony.

**JUDGERS AND PERCEIVERS**

Judges are energized by planning, organizing, and structuring their day. They like creating a routine and are stimulated by closure.

Perceivers are energized by new possibilities, alternatives, and being spontaneous. They are stimulated by having more options.

## Prepare a Self-Introduction (Audio or Video)

An elevator pitch is an excellent way to introduce yourself to someone you just met who might be a prospective recruiter or professional network. This brief introduction must ideally not more than 60 seconds and should highlight your unique selling point and communicate your personal brand. Your unique selling proposition and personal branding can be determined by discovering yourself and determining what others may want from you into one or two brief sentences.

To stand out from the crowd, you can create and record your elevator pitch introduction. You can upload them to your personal website and social media channels (e.g., YouTube, LinkedIn) to increase your online presence.

To stand out from the crowd, you can create and record your elevator pitch introduction. You can upload them to your personal website and social media channels (e.g., YouTube, LinkedIn) to increase your online presence.

**\* Elevator Pitch - This brief introduction must ideally not more than 60 seconds and should highlight your unique selling point and communicate your personal brand**

### Preparing your CV

The unpopular belief that CVs are dead and employers or recruiters no longer read them is not true at all. SVA Recruitment Consultant Victor Chen, who has more than ten years of experience in the recruitment field, asserted that tailoring your CV is crucial for getting the hiring managers or recruiter's attention.

Applicant's resume/CV is screened in an average of 7 seconds, so you must make use of that limited window.

## Preparing your CV

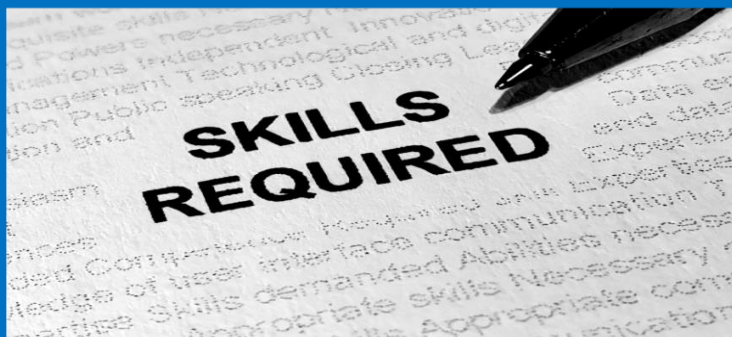

The unpopular belief that CVs are dead and employers or recruiters no longer read them is not true at all. SVA Recruitment Consultant Victor Chen, who has more than ten years of experience in the recruitment field, asserted that tailoring your CV is crucial for getting the hiring managers or recruiter's attention.

Applicant's resume/CV is screened in an average of 7 seconds, so you must make use of that limited window.

Stand out by using appropriate keywords matching the Job Ad or Description to highlight your matching skills and experiences. Make it easy to find by placing it somewhere where it's not lost amongst the text of the rest of your resume, or underline/highlight it. They look for facts and numbers. For example, your highest sales achievement, your finished websites, or the digital media tools you proficiently know how to use.

These materials must particularly deliver the specific role you want to impart in the company. This means that you should have more versions of your resume saved ahead instead of sending out the same version to all jobs, employers, and recruiters. Therefore, tailor your resumes based on the position you are applying to.

## Demonstrate your Skills in your CV through Examples

These skills may come from various experiences gained through previous jobs, hobbies, and even personal lifestyles that are meaningful. State what the recruiter wants to hear about, provide evidence-based on your experience and highlight them in your CV. Use factual information, achievements, and numbers.

## Choose the Right Design & Template

You must choose the proper format in creating your application documents. There are many free and inexpensive resume templates out there that can aid you with this problem. SVA Recruitment offers professional and user-friendly templates and advice that enable you to customize your application details. You can see these templates below.

These materials must particularly deliver the specific role you want to impart in the company. This means that you should have more versions of your resume saved ahead instead of sending out the same version to all jobs, employers, and recruiters. Therefore, tailor your resumes based on the position you are applying to.

## Best Practices to get through an Interview

In the post-Covid-19 lockdown world, competition in the recruitment market is tougher than ever. If you want to secure that all-important job in Hong Kong, then it's essential to have a CV that jumps out for the right reasons

### Choose the Right Template

A good template will save you a lot of time and improve the finished results of your CV. Choose a template which has been designed with your industry and job level in mind. For example, a new graduate might prefer a chronological CV which explains an educational history to date in a clear and concise way. A more experienced IT exec might prefer a functional CV which flags up key achievements in an obvious way.

### Go Short

CVs should be short and easy to read - by human eyes and AI software. Get straight to the point and don't go beyond two sides of A4. Many senior execs manage to condense their achievements into a single side of A4.

Many senior execs manage to condense their achievements into a single side of A4. Ask yourself what is truly relevant to the role that you are applying for - and what is most impressive. If you have a large software development project under your belt, then you don't need to take up time and space talking about your school exam grades.

### Be Professional

Yes, personality is important, but save that for the interview.

A recruiter wants to see professionalism and a format which helps them to pick out the information they are looking for.

A recruiter wants to see professionalism and a format which helps them to pick out the information they are looking for.

Use a simple font; ideally sans serif for easy scanning. Never use Comic Sans! Use black ink and don't include photos or images.

## Use White Space

Embrace the Japanese concept of Ma and focus on the white space of your paper! Clutter makes information hard to digest, so use paragraphs, headings and plenty of empty white paper for contrast and to avoid visual overloading. Use bullet points too to flag up key points, without needing to write full sentences. Less is more here.

## Remember the Basics

Add your contact details and use a professional email address. Check your spelling and grammar several times, use consistent formatting and check that all of your dates match up.

## Focus on the Job

Do a strict copy-edit when you have drafted your CV and remove the irrelevant factors. You probably don't need to mention your hobbies, unless they have some relevance to the role; for example, a volunteering interest can offer transferable skills and be of interest to an employer. Always ask yourself whether the information you are providing will take you one step further to that dream job in Hong Kong - or whether it is simply an irrelevance

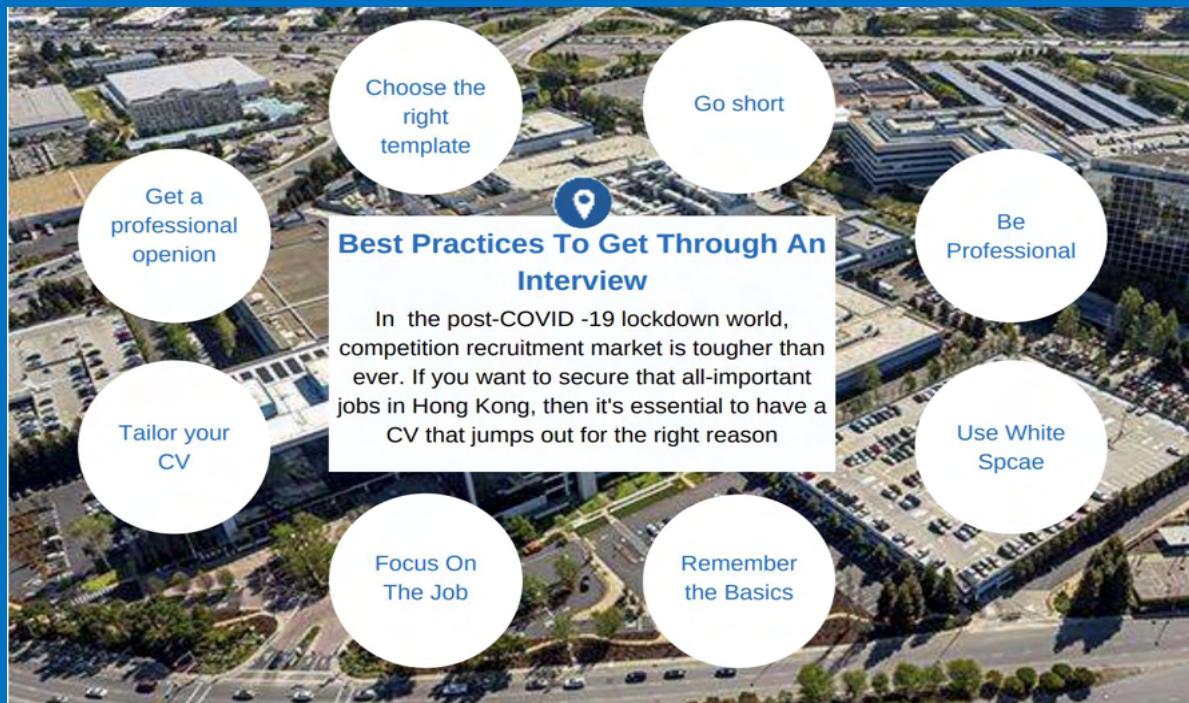

## Tailor your CV

It is a time-consuming business, but it's vital to tailor each CV for each job in Hong so that the information you provide is completely relevant. Maintain a basic 'core information' template and adjust the specifics for every application. You'll need a tailored cover letter for each application too

## Get a Professional Opinion

An agency recruiter within your target industry will be well placed to offer constructive, expert advice on your CV, so share your draft for a review and for feedback. This will help you to find the right job faster. Firstly, it will result in a great CV that has the right impact and it will also place you in the mind of the recruiter so that they understand more about you and the roles that you are interested in

# Build your Online Presence and Personal Brand

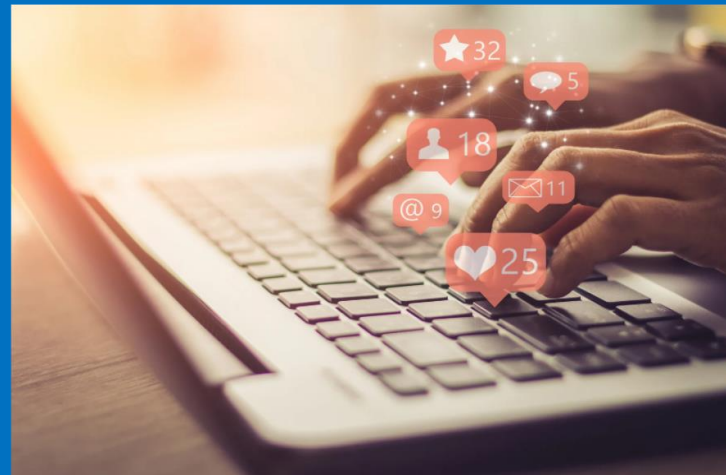

Let them see a glimpse of your skills, experiences, and personality. You can post your professional introduction to your social media channels.

## Maximize Online Presence and Visual Brand

Set up your own website and/or social media. With the advent of technology and the Internet, it is not surprising for us when employers or recruiters search us online. Even in this phase, you have to create an impression that you want to leave with your audience.

## Start a Twitter & YouTube Channel and Monitor Social Media Accounts

This is a vital step to stand out by making a robust online presence and personal brand. When recruiters search applicants online, these things will help you get on the top. Your posts help optimize your profile so recruiters can see your content. You can create content that illustrates what kind of an individual you are what skills you have and regular thought leadership.

For instance, if you wish to market yourself as a passionate social worker, you can post about your involvement with social and volunteer works in various social media. If you are an aspiring writer who wants to build a visual brand, you can create your own website or participate in multiple online platforms to showcase your skills and work. There are Best Website Builders available online where you can freely create and build your own website platforms.

\* Personal Branding – Your posts help optimize your profile so recruiters can see your content.

## Make Use of LinkedIn and Other Professional Networking Tools

One of the most excellent venues to create an online resume and build professional networks is LinkedIn. Utilizing this online platform can be advantageous to you because it has many features that helps enhance your personal branding. You can establish your expertise through the LinkedIn content platform, interact with your community via brand pages and groups, and reach out to others via LinkedIn messaging.

**LinkedIn** offers more opportunities for users to network every day than other social media channels like Facebook and Twitter. Constantly update your LinkedIn and Facebook profiles because recruiters visit them. Make use of your social media accounts. Post and display things that you think recruiters will like to enhance your professional brand.

\* Personal Brand - Constantly update your LinkedIn and Facebook profiles because recruiters visit them. Make use of your social media accounts

## Participate in Forums and Group Discussions

This is very advisable to join and participate in online discussions to gather people who have the same interest and make them your potential networks. Also, keeping in touch with timely discussions regarding the industry you are interested in keeps you updated and informed about the current market trends. By sharing information, asking questions, and being interested in different topics in your field, you can expand your network and knowledge.

“If you have something that you don’t want anyone to know, maybe you shouldn’t be doing it in the first place” -Eric Schmidt

## 1. Do your Research

It is important for applicants to spend time researching the company's organizational culture, mission, and shared values. This part can be done by viewing the company's website, online platforms, or through someone you know who is part of the organization.

Understanding these organizational factors are a vital part of practicing for an interview. Therefore, you can leverage your edge over others once you learn as much as possible before applying and during the interview process.

## 2. Practice Makes you Perfect

Or maybe not, but it can make a huge difference compared to those who don't. Rehearsing before the interview is never a bad idea. This would be the part where you write and familiarize yourself with the details you gathered from the company you are interested in. While you are at it, practice the skill of leaving a positive impression on the interviewer. We cannot argue how first impressions are a vital factor to stand out from the crowd. The following are some tips on how to make a great first impression to interviewers:

**Dress to Impress.** No matter how hard we can deny it, looks matters indeed to stand out among the crowd and to gain the interviewer's attention. Dressing appropriately for the occasion. The way we dress and represent ourselves are crucial factors to the success of the interview. Others who take this factor less seriously tend to not stand out from the rest. Learn when to talk and list

**Learn when to talk and listen.** Interviewers often find it annoying or boring when the applicant is too talkative or too shy to market themselves during the interview. The professional introduction or elevator pitch we discussed earlier is applicable here when introducing yourself. Do not talk so much about yourself and learn to listen to how others speak. You might have the most excellent record in your field, but eventually, people are going to want to talk about themselves- and you should let them. Not everyone knows how to listen so that will give you a great remark to stand out and be remembered.

### 3. Prepare Questions in Advance

Remember that you are being interviewed not because of who you are but because they would like to know how you can be an asset and make a difference for the company. This means that the interviewer will more likely ask you if you have any questions and that preparing a question in this part is a crucial factor in standing out among the others. Not everyone is ready for this moment, so you have the chance to be remembered based on your questions and the way you asked them.

Asking questions also leaves an impression on the interviewer that you are prepared for that moment and is serious about the position that you are interested in. These questions can range from wanting to know about the company's culture to how they would likely treat you when you are hired. Some remarkable questions to be considered are as follows: Note that ask them in a respectful manner to make an impression and to encourage them to answer your question truthfully.

- What can you say about your organizational culture?
- How does your company define success? How are they committed to ethical conduct?
- What motivates you to get up and work for this company?
- Can you please tell me how does this company performs or treat employees than its competitors?

## 4. Follow up and Make a Lasting Impression

Of course, a first impression may matter, but leaving a lasting impression that keeps you in the interviewer's mind is an achievement. Know when and how to follow-up. Many applicants find it hard how to follow up on the company that they are applying for. One way to do this is to write a thank you email not later than a day after the interview was held. A brief message or email thanking the interviewer for the time you had with them would be a great one.

It would be best if you also took the time to incorporate something specific from the interview moment so they can remember who you are. Emails are one of the convenient ways to instigate a new line of communication. This can be an avenue for recruiters or hiring managers to get back to you to offer you a job or getting in touch with you in the future. This is how essential these factors are.

**\* Preparing Questions - Not everyone is ready for this moment, so you have the chance to be remembered based on your questions and the way you asked them**

CHIEF TECHNOLOGY OFFICER

123-456-7890  
your@emailaddress.com  
123 Abcde St., Any City, ST 12345  
linkedin.com/in/ritadayton

## Profile Summary

Energetic CTO with 10+ years of experience and proven leadership skills. Increased customer satisfaction by 45% and sales by 24% for HHC Software. At Techware, increased the efficiency of the manual testing process by 27% and expanded the customer base by 350%. Eager to drive ROI and technological innovation for KLPR Enterprises.

## Work Experience

### Chief Technology Officer, Company Name

February 2018–May 2021

#### Key Qualifications & Responsibilities

Drove growth and innovation for a leading SaaS company with 3 core products an annual revenue of \$22m.

Initiated and managed the introduction of a cross-platform mobile version of the desktop product, which reached 500k+ downloads in the first quarter.

Generated \$8m in revenue by building strategic relationships with 4 Fortune 500 companies.

Spearheaded the introduction of an automated VoIP Customer Support solution, saving 600 employee hours and \$12k per month.

Coordinated the adoption of the Agile methodology across all departments.

#### Key Achievement:

Led a complete overhaul of the flagship SaaS product, resulting in a 45% increase in customer satisfaction and a 24% increase in sales in the first 6 months.

### Chief Technology Officer, Company Name

September 2014–January 2018

#### Key Qualifications & Responsibilities

Reviewed the existing technology budget, introducing adjustments that saved the company \$3.5m a year in unnecessary expenses.

Streamlined the manual testing process by designing and implementing a proprietary platform for reporting, fixing, and verifying bugs, resulting in a 27% efficiency increase.

Initiated and coordinated the implementation of new data security measures across the company's IT infrastructure.

#### Key Achievement:

Developed and implemented a 2-year platform and functionality scaling plan, expanding the team from 4 to 16 employees and increasing the paying customer base by 350%.

# FIRST LAST

## Junior Full-Stack Developer

New York City, NY 10000 • first.last@resumeworded.com • + 1 (212) 123-4567

### PROFESSIONAL EXPERIENCE

#### RESUME WORDED

San Francisco, CA and New York, NY

##### Junior Full Stack Developer

2016-Present

- Assisted in training and supporting up to 20 new hires per year by conducting interviews and leading seminars.
- Coordinated with web developers to secure core server product development service components for more than 100 client sites, ensuring compatibility with all major browsers on mobile and desktop platforms.
- Managed a full-stack development for a recruiting company with an average of 700 job postings daily.
- Launched and maintained 10 successful websites in 3 years with SEO success by rebranding and developing clients' image.

#### GROWTHSI

New York, NY

##### IT Programmer

2013-2016

- Decreased time required to perform routine tasks by over 70% and average support ticket time by 50% through training incoming personnel, delegating tasks, and documenting processes and procedures in detail.
- Reduced costs from 54% to 25% by administrating the budget per department and reviewing requests for non-standard hardware/software installation and recommending appropriate technical solutions.
- Decreased data processing errors to less than 1% and shipment transaction time by 89% through developing and implementing a custom shipment delivery verification application.
- Saved extracts of \$1.3 million worth of premium data processed in error by utilizing the FOCUS program to identify, analyze, and avoid accounting issues.

#### GROWTHSI

New York, NY

##### Computer Lab Technician

2012-2013

- Improved employees' learning experience by 60% through analyzing and implementing the appropriate options available for department/employee-based software.
- Managed and maintained a lab of 25 iMac computers and the company's wide support of office iPads, iPods, Mac Books, and thin client PCs, performing both hardware and software maintenance as needed.
- Assisted over 40 employees daily on technical issues and routined maintenance.

### EDUCATION

#### GROWTHSI BUSINESS SCHOOL

San Francisco, CA

##### Master of Computer Science

2010-2012

#### RESUME WORDED UNIVERSITY

New York, NY

##### Bachelor of Engineering, Major in Computer Science; Minor in Mathematics

2007-2011

### ADDITIONAL INFORMATION

- Techniques: SDLC (Software Development Life Cycle), NoSQL, and MongoDB
- Technical Skills / Software: Airtable, BlackBoard Software, Apache Spark, Objective C, React, Backbone.js
- Certifications: Full-Stack Developer Bootcamp (2016), Passed Resume Worded examinations

# First Last

## EXPERIENCE

2016-Present **RESUME WORDED & Co.** San Francisco, CA

### *Java Full Stack Developer*

- Developed back-end logic in Java to implement a state-wide underwriting model for San Francisco State to give policy quotes to over 500,000 potential customers, gaining the company an increase in revenue and sales.
- Defined proper rules to incorporate billions of data rows from 3rd-party feeds directly into the product back-end.
- Proactively and strategically worked on the customer-facing insurance application to build conditional components in Angular based on the applicant's various factors ranging from their location to their type of car.
- Created the database structure and logic in Redshift for a new insurance product for pet owners that acquired a successful reach of over 2,000 customers in its first year and over 15,000 customers in the succeeding years.

2014-2016 **GROWTHSI** Beijing, China

### *Tech Lead/Full Stack Developer (2013-2014)*

- Proactively collaborated with 10+ professionals, including PhDs, postdocs, researchers, and data scientists, to develop minimum valuable products based on concept proofs utilizing user-centric design/agile methodologies.
- Worked with a Java squad of 4-5 developers to build modern cloud-based applications with a DevOps mentality.
- Delivered expertise on every part of the application, performing continuous deployment and integration pipelines to different environments (dev, QA, prod), with tests, static and dynamic code analysis, and security audits.
- Attentively managed the front-end and back-end for web and mobile applications, including React and node.js.
- Conducted extensive data pipelines by acquiring data from streaming sources & transforming statistical models.

2012-2014 **RESUME WORDED & Co.** San Francisco, CA

### *Java Developer*

- Developed an automated testing framework for CI/CD to improve the average time to push new builds into production by 45%, gaining success and continuous improvements and efficiency for company operations.
- Contributed expertise on the entire software development life cycle from gathering requirements to building, testing, and maintaining code for an internal Java tool that improved the speed of customer data requests by 85%.
- Acted as the main point of contact (POC) for internal customers whenever there were critical errors in any internal tools, subsequently implementing automated alerts to proactively reduce error support tickets by 75%.
- Spearheaded and initiated the migration process and activities of a web app with a reach of 25,000 monthly users to a Spring Boot back-end, successfully improving the application speed by 17% while diminishing server costs.

## EDUCATION

2008-2012 **RESUME WORDED IT SCHOOL** New York, NY

### *Bachelor of Computer Science*

- Awards: Dean's List
- Membership: Computer Science Society

2007-2011 **RESUME WORDED UNIVERSITY** San Francisco, CA

### *DEC in Computer Science Technology*

- Awards: Technology Award

## OTHER

- Languages: Spanish (native), Chinese (intermediate)
- Technical Skills: Java (Spring, Spring Boot, JavaEE), JavaScript (Angular), HTML/ CSS, AWS (Redshift, S3), Python (Django), SQL (PostgreSQL, Oracle), REST APIs (GraphQL), Git, C#, Entity Framework, Java, WCF, Phone Gap 2.0, XML, WordPress.
- Certifications: Programming in HTML5 with JavaScript and CSS3
- Projects & Accomplishments: Java Project (2012-2013, Programming Project (2016)
- Volunteering: Volunteered 20 hours/month at ABC Foundation (2012-2014)

## ABOUT ME

A resume is a formal document that provides an overview of your professional qualifications, including your relevant work experience, skills, education, and notable accomplishments. Usually paired with a cover letter, a resume helps you demonstrate your abilities and convince employers you're qualified and hireable.

## EXPERIENCES

**SOLUTIONS ARCHITECT | 2014 - 2016**  
COMPANY NAME | ANY CITY

Experience list any relevant work experience you have. Include your title, the company you worked for, the years worked, and a bulleted list of your key responsibilities and notable successes. Be sure to also include as many relevant accomplishments on your resume as possible.

Experience list any relevant work experience you have. Include your title, the company you worked for, years worked, and a bulleted list of your key responsibilities and notable successes. Be sure to also include as many relevant accomplishments on your resume as possible.

**SOLUTIONS ARCHITECT | 2016 - 2017**

INFRASTRUCTURE MANAGER

## PROFESSIONAL SUMMARY

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

## PROFESSIONAL EXPERIENCE

2016-  
2018 **Infrastructure Manager**  
Company Name, Any City

Prevented hundreds of thousands of dollars in erroneous charges to Florida Turnpike drivers by identifying software bug in automated toll-collection system.  
Pinpointed previously undiscovered flaw in new DoD missile-detection system prototype, resulting in formal commendation letter from the DoD.  
Identified the root cause of intermittent interoperability glitch in air-traffic control software, leading to a no-fault audit finding.

2018-

HEAD OF SALES

## ABOUT ME

A resume is a formal document that provides an overview of your professional qualifications, including your relevant work experience, skills, education, and notable accomplishments. Usually paired with a cover letter, a resume helps you demonstrate your abilities and convince employers you're qualified and hireable.

## EXPERIENCES

### JOB POSITION | 2014 - 2016 COMPANY NAME | ANY CITY

Experience list any relevant work experience you have. Include your title, the company you worked for, the years worked, and a bulleted list of your key responsibilities and notable successes. Be sure to also include as many relevant accomplishments on your resume as possible.

Experience list any relevant work experience you have. Include your title, the company you worked for, years worked, and a bulleted list of your key responsibilities and notable successes. Be sure to also include as many relevant accomplishments on your resume as possible.

### JOB POSITION | 2016 - 2017 COMPANY NAME | ANY CITY

Experience list any relevant work experience you have. Include your title, the company you worked for, the years worked, and a bulleted list of your key responsibilities and notable successes. Be sure to also include as many relevant accomplishments on your resume as possible.

### JOB POSITION | 2017 - 2018 COMPANY NAME | ANY CITY

Experience list any relevant work experience you have. Include your title, the company you worked for, the years worked, and a bulleted list of your key responsibilities and notable successes. Be sure to also include as many relevant accomplishments on your resume as possible.

EMPLOYMENT HISTORY

**Chief Marketing Officer · Studio Shodwe**

May 2020 - Present

Effectively developed marketing tactics and managed marketing relationships with essential Licensing and International partners.  
Ensured that all trade and consumer facing strategies were seamlessly integrated by creating sell sheets and other materials.  
Managed an event budget, facilitated eight trade shows and ensured events were effectively and consistently used to drive marketing results.  
Met and exceeded all targets nationwide on every campaign.

**Chief Marketing Officer · Studio Shodwe**

March 2019 - April 2020

Working with and under the supervision of the Sales director, initiated and iteratively developed effective campaigns.  
Established and maintained excellent relationships with strategic partners internally and externally that were crucial to company success.  
Researched and understood the motivations of users to effectively implement ecommerce improvement strategies.  
Regularly prepared reports and presented to management teams.

**Chief Marketing Officer · Salford & Co.**

April 2017 - March 2019

Developed and effectively implemented site merchandising strategies that led to increased sales for eight straight quarters.  
Recognised improvement opportunities across the user journey and developed brand-specific content strategies to address these.  
Created and planned quarterly playbook to support product launches.

**Digital Advertising Operations Executive · Fauget**

June 2016 - April 2017

Provided exceptional customer support that resulted in repeat and increased business from six new advertisers.  
Effectively managed campaigns that achieved client objectives.

HIGHER EDUCATION

**Master of Media & Communications**

Warner & Spencer  
2018

**Bachelor of Business - Marketing Major**

Ginyard International Co.  
2015

INDUSTRY EDUCATION

Introduction to Content Creation Seminar · Borcelle · April 2021  
Storytelling for Business · Paucek and Lage · May 2021  
Developing IP Intensive · Borcelle · December 2021

RELEVANT SKILLS

A lateral thinker with exceptional creative problem solving skills.  
Trained in research analysis and trend forecasting.  
Adept at both waterfall and agile project management methodologies.  
Strong interpersonal communication skills.

Silicon Valley Associates  
Recruitment

# Highly Recommended Tech Jobs for the Sociable IT Professionals

As a specialist IT Recruitment Agency in Shanghai, Silicon Valley Associates' Tech Recruiters are well aware that Information technology is often considered an introvert's field.

Whether that is a stereotype or bears some truth, our Tech Recruiters have first-hand experience that the more outgoing types can just as easily thrive in this field, too. SVA Recruitment has found that the IT industry has a place for all personality types.

What is an extrovert?

Some personality traits commonly found in this type of person are as follows:

1. Enjoy working in teams
2. Inspired by socializing
3. Tend to be impulsive
4. Likes to be the center of attention
5. Approachable
6. Outgoing

Extroverts occupy a broad range of behaviors. Some people believe that extroverts are obtrusive, argumentative, and unable to spend time alone; however, the description does not apply to them all.

## Why is Extrovert considered counter to the field of IT?

Extroverts generally have a strong need for human interaction, whereas IT is very much all about interacting with computers. Whilst the more sociable types are considered more productive and efficient when they work in an environment that fosters interaction and teamwork, IT engineering is more of an individual job.

Most sociable workers often find that remote working environments are uninspiring and prefer office jobs where they can interact with their colleagues- isolation can be a stressful experience for them. SVA Recruitment finds the opposite is true of IT professionals,

in particular developers, who overwhelming prefer remote/virtual, work-from-home with limited requirements to be in the office, or even have to commute too far.

So even though certain tech jobs—like programming and writing code—might seem like solitary work, Extroverts can be especially effective in the field of computer science because of their natural people skills, especially in jobs that require frequent client interaction, and team collaboration, and presentations to managers are necessary.

In this article, our IT Recruitment Agency would like to list the 5 top tech jobs for the more extroverted IT Professionals reading this article, as suggested by our expert IT Recruiters in Shanghai.

### 1. IT Project Manager

An IT project manager plans, budgets, and schedules large computer systems projects for organizations. They coordinate closely with clients and management to identify key goals and deliverables, assign tasks to other IT staff members, track progress, and report on the project's status. Project managers must work collaboratively with many different types of people; including managers, IT professionals, clients, and stakeholders.

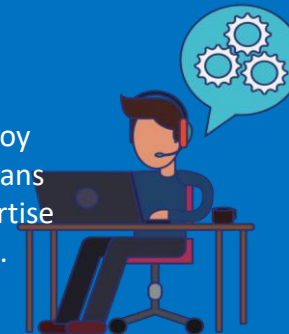

For an extrovert, this is a dream job. As hands-on managers, they will need to demonstrate leadership, communication, and collaborative abilities.

### 2. Help Desk Technician

Help desk technicians solve all sorts of problems, from faulty software to a sluggish Internet connection. They diagnose problems and offer solutions to both individuals and companies. Support technicians collect feedback and document common problems, working closely with end-users, company clients, stakeholders, and other technology professionals. Their findings help management prioritize fixes.

Extroverts perform well in these positions because they thrive on interpersonal interactions and enjoy helping others. Help desk technicians must possess both technical expertise and strong customer-service skills.

### 3. Digital Marketing

Digital marketers oversee the search engine optimization strategies, social media accounts, and web and email activities of businesses and organizations. Marketers also establish the goals of various campaigns and evaluate their results. Digital marketers perform a variety of marketing tasks, which may include market research, communications, and user experience design. These professionals often collaborate with other professionals in marketing, web development, programming, and design.

Silicon Valley Associates  
Recruitment

Fit for extroverts as they will help organizations and clients attract attention to their products and services. Working with various departments, they'll be able to show off creative abilities as an organizer and communicator.

## DIGITAL MARKETING

### 4. IT / Tech Recruiter

Tech recruiters work with management to identify and fill technology job openings within organizations. They seek out new candidates, research them, and screen them for qualifications. Recruiters act as intermediaries between companies seeking candidates and job seekers. They help companies post job openings and interview candidates, as well as negotiate salaries. Tech recruiters work with a variety of people both inside and outside the company they represent, including managers, communications professionals, and candidates.

A tech recruiter position is a good fit for an extrovert, as the job will require frequent communication with people and the opportunity to meet new people.

### 5. Software / Tech Sales

Technology sales professionals are responsible for the sale and distribution of software, hardware, and technical services to consumers and clients. They maintain a thorough knowledge of the product through research and meetings with potential clients.

Sales professionals work with many different people in the business, including marketing, technology, and management. They pass along information from consumers to help improve products and services.

Extroverts are suitable candidates for sales professionals because of their sociability and interpersonal strengths. They may also have stronger social skills than other types of job candidates and thus enjoy the dynamic work environment.

### 6. Systems analyst

Systems Analysts examine the efficiency of computer systems and recommend the implementation of necessary upgrades. They work with technology professionals to evaluate current technology systems, define the technological needs and challenges of the organization, and create plans for implementing new systems. Computer analysts will have more career opportunities and may specialize in certain technologies; such as programming, computer systems, networks, databases, or even implementing large IT projects.

## 7. Network Administrator

Network administrators are responsible for monitoring and troubleshooting networks, upgrading and installing new servers, maintaining security, and optimizing the performance of these networks. Network administrators may require a network administration degree, which provides the training necessary for working in this field. They work with management, computer technicians, and end-users to research and develop systems that meet the needs of all these groups.

Extroverts will enjoy this job because it offers them a chance to work collaboratively with people, discuss specific challenges with users, and learn new skills from their colleagues

## 8. Web Developer

Web developers design, create and maintain websites. They may work on the back-end or front-end of web development. When creating a website, developers work with clients, graphic designers, other developers, marketing representatives, and others.

Web developers work with clients and teams to create websites. This may appeal to extroverts, who often prefer team activities.

## 9. Scrum Master

Scrum masters oversee projects and software teams. They ensure that their teams comply with development procedures, monitor progress, and provide coaching to team members. Scrum masters also resolve issues that arise during the development process. Scrum masters work with a cross-functional team to implement Agile methodologies. To do this, they must communicate regularly and collaborate closely with the team and stakeholders. They also motivate the team to become more productive.

You can expect to use your leadership, organizational, and interpersonal skills when working in this position. Extroverts will enjoy interacting with others in this job. They will regularly meet with the product owners and management for feedback and stay involved in projects so that everything is progressing smoothly.

### 10. User Experience (UX) / User Interface (UI) Designers

UX / UI designers are responsible for the digital product's user interface and its usability. They assess a potential user's needs, then design visual aspects and control mechanisms that respond to those needs. They also integrate branding and marketing messaging into the product.

The job of a UX designer involves designing and researching user interfaces. UX designers work closely with the development team, marketing, and management to create new products and make existing ones better.

User-experience (UX) designers must gain an understanding of what end-users want from a product or website. They are required to interact with members of the company's development and marketing teams and explain the results of user research to them.

Silicon Valley Associates  
Recruitment

# How to Successfully Kick-start your Career in IT Tech

One of the top IT Recruitment in Shenzhen, Shanghai, Hong Kong, Dubai, Japan, and Singapore, SVA Recruitment is an IT and employment agency that provides jobs, executive search, and recruitment services.

Starting a career in the IT Tech industry can be difficult and can often present you with unexpected challenges. There are many ways how you can successfully overcome them. In this article, IT Recruitment Agency Silicon Valley Associates will tackle 4 problems and their solutions, no matter whether you happen to be based in Hong Kong, Shenzhen, Shanghai, Singapore, Japan, or Dubai.

Technology is progressively becoming a significant part of our daily lives; may it be in health care, sales, architecture, and others. Even IT Recruitment agency is becoming more reliant on technology. This just proves that the tech industry is thriving and a worthy career path.

For many people, a desire to transition to a career in technology exists but they experience roadblocks along the way.

This year, our Tech Recruiters, SVA Recruitment have listed some of the challenges and how you can successfully overcome them

## 1. Problem: Lack of tech-related degree

Many job seekers feel unprepared to handle a tech role without a relevant degree. In spite of the fact that a technical degree can be very convenient, there are other ways to enter the technology field. Did you know 26 percent of IT professionals reportedly do not have a college degree, and even more employees do not have a degree in a tech-related field?

While hiring managers often look at your degree when considering you for a job in many careers, IT recruiters like those here at SVA Recruitment Agency are more interested in your ability to get the job done than your diploma when hiring for tech jobs. Your technical CV should include both the degrees you have earned and other relevant information about your skills and experience- a reason why you must focus on obtaining skills and experience instead of worrying on the tech degree that you don't have.

**Solution:**

1. Try to acquire other relevant IT certifications Research valuable courses that are related to your field. Online courses are gaining popularity among professionals in the field of technology. Certification offered by accredited online sources can help you compensate for a lack of relevant academic credentials. There are many opportunities for people to pick up the skills and certifications they need to transition to tech. Coursera, edX, Codecademy, MIT OpenCourseware, LinkedIn Learning, and Khan Academy are some of the most popular ones.

2. Gather experiences Recruiters may overlook a lack of academic degrees, but they will not ignore the lack of practical industry experience. Software developers are expected to have experience with coding in the industry. After gaining the skills needed for a particular professional field, you will need to obtain experience in the field before you can become competitive.

Volunteering to work on open-source projects, working as a freelancer, or taking up other volunteer tech roles can all help you pick up the industry-relevant experience you need to land your next job.

3. Reach out to relevant groups. The tech industry is a network of contacts and connections. It is essential to be a part of online and offline networks relevant to the tech world once you are ready to enter that field. On social media sites such as Reddit, Quora, and LinkedIn, you can find tech communities for the field to which you aspire. The right connections can be valuable when seeking a job in tech. It is true that academic degrees are an important factor in career progression, particularly when it comes to climbing the corporate ladder. Although this is generally true, it may occasionally prevent you from being considered for a position in which you are deeply interested. For those who lack a certain technical degree, a transition can be difficult to make.

## 2. Problem: Expensive tech courses

Although costs of specialized certifications may appear high, they are significantly less than the price of some academic degrees. For example, the CCIE Routing and Switching certification is a coveted acknowledgment of advanced knowledge in the area of Cisco networking. This certification can be the difference in you landing a high-paying job in the field of network engineering.

### Solution:

Those who are less financially secure need not despair. Most expensive technology courses are always accompanied by lower-cost or free alternatives. Keep in mind, an expensive software training course is not required to be considered a professional. With the rapid development in technology, there are various online certificate programs available, which can lead to lucrative jobs.

There are many affordable (and free) online courses for learning Oracle and CISCO. You'll find thousands of other high-quality but affordable courses on web development, app development, graphic design, and several other tech niches. There are many learning platforms to choose from, including edX, Udemy, LinkedIn Learning, and others.

It is possible to transition into a tech job without expensive and complicated training courses. Just start learning.v

## 3. Problem: Age is not just a number

Like most other industries, there is a stereotype that tech is for younger professionals. But just as in many other industries (even public service jobs), ageism is, unfortunately, an issue. You may find it more difficult to pursue a career in new technology if you are older than 40. Some hiring managers may favor younger candidates over older ones, regardless of the candidates' qualifications. But just as technology is not for anyone gender, it also isn't solely for any age group. It is possible to succeed in your tech endeavor despite ageism.

### Solution:

Use your skills & knowledge most especially your experience as an advantage. While younger applicants may be perceived to have more energy, older applicants are often viewed as having an advantage in terms of experience. Hiring managers are interested in transferable skills, even for positions that require a different set of experiences than your previous job. Even so, if you change careers with relevant industry sectors, such as health science to software building for healthcare companies, your work experience and skills can help you overcome age discrimination. When applying for jobs with tech companies, it might be beneficial to focus on skills you already have, regardless of how old you are.

- Choose tech niches that are easy to learn. There are reports from various Labor departments globally that a significant number of people between the ages of 45 and 65 were employed in tech-related fields in 2021. This trend is expected to continue.

It might not be wise to target niche markets that require an abrupt learning process and are already limited by age. Taking up a career field such as artificial intelligence or machine learning might take additional time investment than if you took up a more niche technical field such as web development. Choose your career path wisely. People of any age can make a successful transition.

**4. Problem: No clear head start.** Technology is such a vast field, with so many sub-sectors and specialties, that it can be difficult to decide where to start. If you are trying to determine which niche of the tech industry to enter, keep in mind that there are two important points to consider:

### Solution:

Do your research. For people who don't have a strong interest in any particular field, researching career opportunities in technology can be a challenge. If you are in the health sector, pursuing a career in health technology might be a good fit. Or if you are interested in agriculture or entertainment but also technology, review similar opportunities in tech that interest you.

- Determine a clear goal. How do you hope to use your technology skills? Do you need a side hustle to support your main income source? Do you need a full-time job that offers stability? It is important to reflect on your career goals. What do you hope to achieve in tech? How much money do you want to make? Are you okay with a less stable job, or do you need one that offers financial security?

- Choose tech niches that are easy to learn  
There are reports from various Labor departments globally that a significant number of people between the ages of 45 and 65 were employed in tech-related fields in 2021. This trend is expected to continue.

- If not now, when? Transitioning to a tech job is challenging due to the lack of experience many people have with the tech industry. If you are passionate about technology and are willing to work hard, a career in the tech industry can be immensely rewarding. Thus, if you are thinking of making a career transition, now is an excellent time to do so.
